PROFESSIONAL SUMMARY

AI/ML Engineer hands-on experience building RAG pipelines, multi-agent LLM systems, hybrid retrieval architectures, and vision-based automation agents, deployed as REST APIs in Python. M.Sc. in Computer Science.

WORK EXPERIENCE

AI/ML Engineer | Gaude Business and Infrastructure Solutions Pvt Ltd

May 2025 – Present

- Designed and developed a Retrieval-Augmented Generation (RAG) pipeline integrating transformer-based LLMs with dense embedding representations for domain-specific information retrieval
- Optimized model fine-tuning and embedding-based vector search to enhance semantic relevance and retrieval accuracy
- Developed and deployed containerized ML inference APIs using FastAPI and Docker for scalable and reproducible model serving

Application Developer Intern | Online Internship

Apr 2025 – Jun 2025

- Built and deployed a web-based video sharing platform, handling both frontend and backend development end-to-end
- Designed and tested REST APIs for video upload and streaming features, resolving backend data-handling issues independently

EDUCATION

M.Sc. Computer Science | University of Kerala

Kerala, India | 2023 – 2025 | Kariavattom Campus, Thiruvananthapuram

B.Sc. Computer Science | University of Calicut

Kerala, India | 2021 – 2023 | Le-ment College of Advanced Studies, Pattambi

PROJECTS

Malayalam RAG: Intelligent Document Retrieval System | Python

- Designed a RAG-based system for querying Malayalam PDF documents using OCR and semantic search, integrating hybrid retrieval (FAISS + BM25) with LLM-based response generation

Student Management System | Python & MySQL

- Designed and developed a database-driven application for centralized student record management, with backend modules for enrollment processing, performance tracking, and status management

E-commerce Web Application | Python, Django

- Built a Kudumbashree product sales platform using Django and MySQL with product management, order processing, and user account features

Encrypted Malicious Traffic Detection using Deep Learning | Python

- Implemented a hybrid LSTM + GCN model on the UNSW-NB15 dataset to detect and classify encrypted malicious network traffic across multiple attack categories

TECHNICAL SKILLS

Generative AI: Experience with Retrieval-Augmented Generation (RAG), hybrid retrieval (FAISS, BM25), LLM application development, multi-agent workflows, and prompt engineering

Backend & Deployment: Proficient in Python with Django and FastAPI, REST API development, and working with SQL/MySQL databases

Vision & Data Engineering: Familiar with OpenCV, vision-based automation, and dataset preprocessing pipelines

Tools & Platforms: Git, VS Code, JIRA (Basic), Google Colab

CERTIFICATIONS

Data Visualisation: Empower Business with Effective Insights • Data Analytics and Visualization • Data Science for Engineers – NPTEL, IIT Madras • Microsoft Power BI – Data Analytics and Visualization
